

Arise²

Are you always tired because of idiopathic hypersomnia?

If YES, you may qualify for a clinical research study.

The Arise² clinical research study hopes to find a more effective treatment for IH. The study will look at the safety and effectiveness of the study drug on mental foginess, sleep, functionality, and quality of life in those with IH.

Participants must meet these criteria*:

- Male or female 18 to 70 years of age
- Hypersomnia that began between ages 10 and 30
- Prior diagnosis of IH
- Stimulant use is allowed if certain criteria are met
- No diagnosis of severe sleep apnea
- No use of a CPAP machine when you sleep at night
- No history of another disorder causing hypersomnia other than IH (includes narcolepsy type 1, narcolepsy type 2, any circadian rhythm sleep-wake disorder, or severe periodic limb movement disorder)

*Other criteria will apply.
