

Arise<sup>2</sup>

## Does your patient have idiopathic hypersomnia (IH)?

If YES, your patient may be eligible for the Arise<sup>2</sup> clinical research study, which will determine the safety and effectiveness of BTD-001 on mental foginess, sleep, functionality, and quality-of-life measures in those with IH.

### Key Eligibility Criteria:

- Male or female 18 to 70 years of age
- Onset of hypersomnia between 10 to 30 years of age
- Previous diagnosis of IH via actigraphy/sleep log and MSLT test
- Epworth Sleepiness Scale score  $\geq$  11
- No history of another disorder causing hypersomnia other than IH, including narcolepsy type 1, narcolepsy type 2, any circadian rhythm sleep-wake disorder, or severe periodic limb movement disorder
- No severe sleep apnea syndrome
- Does not currently require the use of a CPAP machine
